

Instructions for Updating Templar 5 Enterprise Edition to Templar 6

Please contact Templar Support if you have any questions about this process.

Before updating a production system, updates should be applied to a test system so that any enhancements or additions in the update can be fully evaluated for your unique environment.

This update can only be done to Templar 5.5.57.25. If you are running Templar 5.3 or earlier version of 5.5 you will first need to update to 5.5.57.25.

Directions

Step 1. Download the installer from the Templar Support website at <http://support.templarsoftware.com>.

Step 2. Shut down your Templar 5 Enterprise.

Step 3. Backup the entire Templar 5 directory and database.

Step 4. Run the executable and when prompted specify the install location of your Templar Server install. Then click Next and it will apply the update.

Step 5. Start the Templar Server and the first time it runs it will complete the update.
